### **ABSTRACT**

This editorial is about notion of a similarity between gods and dimension.

A step to understand who are they and why they exist.

This editorial will let you understand, how to reach for perceiving the gods. Gods are somewhat dimensionless characters which exist but we can't see with our naked eyes. So let us begin our notion to perceive what gods are. It is an acute war between religion and science of understanding the extraordinary concept of gods. On the behalf of religion Gods are nothing but a pure soul from heaven who helps us in need. What if the science proves that the gods are the images of higher dimensions which we're not able to conceive due to alien to the dimensions known to us? It is our firm belief that gods are soul and we can't see them, but if what this proves wrong anytime?

We need to clinch a step forward in order to say these things as they are sounding very nonsensical.

**KEYWORDS:** Gods, Dimensions, Higher Dimensions Civilizations and Mutiny between Religion and Science
